Kali Linux Mini Starter
USER GUIDE

Installation instructions

If you downloaded Kali Linux Mini Starter from anywhere besides github then the scrips wont be executable after unziping, to make this easier for you i made a script called chmod. this script will make all the other scripts executable and save you alot of time. you will only have to make this one script executable then run it to make all the other ones executable before installation

1. Download the file and unzp
2. Copy the scripts folder you unziped to your Desktop
3. Open a terminal and cd to the **scripts** ditectory (unziped folder)
        Type **cd Desktop**   Press Enter
        Type **cd scripts**   Press Enter
4. Type **chmod +x chmod** to make the chmod script executable
5. Run the script by typing **./chmod** (Dont mind any errors :-) hehe)
6. Run the setup by typing **./setup.sh**
7. Close the terminal and open a new one and type **start** and enjoy

This is a simple "Program" written in bash. You dont have to be a Programmer to write this, all you need to know is linux commands and how to move around the linux file system. and of course the very important hashbang header #!/bin/bash in evry script, Complex scripts will now require abit of programming skills, Feel free to edit/modify the scripts to your own liking
